Subsequent evolution of our model will align more closely with this effort. There is a particular need to integrate research and clinical data to facilitate personalized medicine approaches to cancer treatment, allowing tailoring of approaches based on the genetic makeup of each individual patient and his or her tumor characteristics. EmbedSizepx. Which patients had medications that were ordered as per physician charts but not administered as per Medication Administration Records MARs or nursing records? More detailed models are needed to build phenotype descriptions that capture the inherent complexity and diversity in the manifestations of human disease.

This review identified both new data elements and new linguistic modifiers with vendors: how do we appropriately use open standards and APIs to instrument and enhance enterprise systems? Harvey V.
